MCP Unveils Groundbreaking Carrier Identity Tool for Enhanced Fraud Protection and Risk Assessment

Simi Valley, Dec. 22, 2023— Today, MyCarrierPortal (MCP), a leader in carrier identity and fraud protection technology solutions, announces a significant enhancement to its platform with the introduction of the Carrier Data Matching tool.

The Carrier Data Matching tool is designed to empower our customers by notifying them when a carrier's company address, phone number, email, or fax matches data with other carriers. This critical information is seamlessly integrated into the risk assessment, providing users with real-time insights to strengthen fraud prevention efforts.

The Carrier Data Matching Tool offers users a range of key features aimed at enhancing transparency and efficiency. Instant alerts within the risk assessment ensure users are promptly informed about matching data with other carriers. In addition, the newly added "Carrier Matched Data" section provides users with a quick and efficient search tool to access detailed information on carriers' DOT, yielding match results within seconds. For users with custom risk assessments, administrative access allows for the adjustment of Carrier Matched Data factors to align with the specific preferences of the company.

The integration of Carrier Matched Data into the risk assessment process by MyCarrierPortal (MCP) proves instrumental in detecting matching data with other carriers before onboarding. This proactive approach significantly mitigates the risk of potential fraud and double brokering. The user-friendly search tool facilitates rapid access to crucial information, empowering users to make well-informed decisions efficiently. The organized presentation of Carrier Matched Data offers a clear indication of carriers with matching data, including their entity type, authority status, and quick links for further research. By proactively notifying users of matching data, MCP plays a crucial role in preventing collaboration with suspicious or untrustworthy entities, thereby reducing the risk of losing valuable loads.

The Carrier Data Matching Tool not only benefits customers but also provides advantages to carriers by notifying them if their information is potentially shared or stolen. This notification prompts corrective action, allowing carriers to take steps to safeguard their companies. Demonstrating a commitment to continuous innovation and addressing the evolving needs of the transportation sector, MCP has made the Carrier Data Matching tool live for Industry Standard users without requiring additional actions. Moreover, users with custom risk assessments can customize the tool to meet their specific requirements, showcasing MCP's dedication to providing tailored solutions for its users.
